

Dear valued customer:

The COVID 19 pandemic has brought on a multitude of operational/supply chain challenges to manufacturing facilities. This is impacting many suppliers of pneumatic products that rely on overseas plants, resulting in delivery delays and shortages on quantities to a large base of customers. Some suppliers have cut back operations while others have shut down temporarily. This can have a major impact on companies that use pneumatic products in their effort to service essential operations and key industries.

*To address these delivery concerns, Flow Products can provide Parker pneumatic products such as air cylinders, global air preps and valves in **less than 1 week** as these are built in Ft. Wayne, Indiana and Otsego, Michigan.*

The Parker supply chain is robust and the plants fully operational.
